TrueNicks: AN EXPLANATION

Nicks in History

Compatibility of stallions from one male line with mares from other sire lines has shaped the breed since the Eclipse/Herod cross of the late 18th century. Called nicks, these successful crosses—Hermit/Stockwell, Lexington/Glencoe, Bend Or/Macaroni, Phalaris/Chaucer—have made a profound impact on the development of the Thoroughbred. In the modern era, the prolific Mr. Prospector/Northern Dancer cross has produced outstanding racehorses and sires such as Kingmambo, Distorted Humor, Elusive Quality, Thunder Gulch, and Grand Slam.

Fast-Forward to the 21st Century

Computers have now made it possible to measure and rate nicks, which has given rise to a commercial market for such statistics. Though popular, the nick ratings offered to the public to date have been compromised by incomplete data. This inevitably yields results based on hypothetical rather than real opportunity. This statistical gap was the impetus behind the development of TrueNicks.

A Statistically Valid Approach

Unlike other ratings that are calculated on the basis of hypothetical opportunity among a limited group of horses, the TrueNicks rating utilizes the database of The Jockey Club – the world’s most complete records of Thoroughbreds and their performance — to produce a sophisticated rating based on all foals for a given cross.

The Statistics

A TrueNicks rating is derived from two statistical elements: a Sire Improvement Index (SII) and a Broodmare Sire Improvement Index (BSII). Both of them compare the percentage of progeny stakes winners to starters. An SII of 2.0 indicates the sire/sire line has twice the percentage of stakes winners out of mares by the broodmare sire/sire line as he does when bred to all other mares. A BSII of 3.0 indicates that the percentage of stakes winners out of a stallion’s daughters when bred to the chosen sire/sire line is 3.0 times as high as the percentage of stakes winners produced by the same mares when bred to all other studs.

The TrueNicks Calculation

The TrueNicks rating is then calculated by multiplying the SII by the BSII, effectively recognizing the real opportunity and performance of the given cross. In the example above, an SII of 2.0 and a BSII of 3.0 would result in a TrueNicks variant score of 6.0, indicating that the nick performs six times better than average opportunity, translating to an A+ TrueNicks rating.

Meaningful Ratings

With the entire database of The Jockey Club at its disposal during development, the TrueNicks rating was calibrated on a test group of over 100,000 horses of racing age. Converting the raw TrueNicks score to a letter rating – A to D and F, as in the academic system – reveals some intriguing results that verify the existence of nicks across a whole population. For example:

1. While only 13% of the entire Thoroughbred population earn “A” rankings (A to A++), 37% of the stakes winners rate as “A’s.”
2. Horses rated “B” or better (B to A++) represent just 30% of the entire population, yet 3 out of 4 (77%) stakes winners rank “B” or better.
3. Almost half of Thoroughbreds in general—44%—are on the low end of the scale (rated “C” through “F”), yet only two in 25 stakes winners (8%) have these lower rankings

Interpreting the Ratings

TrueNicks is a powerful mating tool but like all pedigree analysis programs they are one part of the picture and should be weighted as such. The developers of TrueNicks strongly recommend that you consider all factors when planning your matings including the desired physical outcome of the resultant foal and seek, where appropriate, advice on the mating. TrueNicks is an expression of one specific aspect of the pedigree, that of the sire line/broodmare sire line cross. From our studies in developing TrueNicks, looking at over 100,000 horses, it is clear that there is a strong correlation between the sire line affinities and success, as expressed by wins in stakes events.

That said, there are a number of reasons not to blindly follow a rating without due consideration of class, conformation, and aptitude. While the rating is a wonderful tool to apply when trying to determine *primus inter pares* – first among equals – common sense must be used when considering the class of the pedigree.

After all, we must never forget that at the end of the day, we are attempting to breed racehorses and not ratings.

Using Your Report

The TrueNicks Stallion Affinity Report consists of a premium edited pedigree from equineline.com; a TrueNicks pedigree for the subject stallion; a table of broodmare sires that rate B+ or better sorted by Variant; a table of broodmare sires that rate B+ or better by Sire Improvement Index; an alphabetical sorting of all the broodmare sires that have been rated against the stallion and finally a report by sireline.

Although the broodmare sires on the first table is sorted by variant, we recommend that users pay closer attention to the associated letter grade. The calculation that provides the TrueNicks variant does not result in a linear scale, therefore, the rating for a nick that has performed below opportunity can only fall between 0.01 and 0.99, the rating for a nick that has outperformed opportunity can be anywhere from 1.01 to 500 or more.

Studies of over 100,000 horses indicate that, all other factors being equal, strongest consideration should be given to matings that rate B+ or better. Of course, matings that result in lower ratings may well still be viable, especially if other compensating factors, such as the class of the sire and the dam, or successful patterns of inbreeding and line-breeding, are being taken into account.

The Sire Improvement Index is a feature that is unique to TrueNicks and only available to purchasers of the Stallion Affinity Report. There are instances where a mating results in an above opportunity TrueNicks ratings, but is based on the broodmare sire particularly “improving” the sire, and other instances where the reverse is true. It is optimal for stallion owners to seek mares by broodmare sires that give a high SII score in addition to the B+ or better TrueNicks rating.

The report by sireline gives the user the ability to see how particular sire lines rate with the subject stallions. Users will note that certain branches of popular sire lines will rate quite differently based on how these branches have performed with the subject stallion allowing the user to discriminate the sire lines that suit the stallion best.
